REMARKS

Very thanks for Examination's suggestion and thanks for finding some citations about the present invention, thereby, the applicant may know more information about the invention.

We have slightly amended the claim 3 as above list of claims, which can describe the features illustrated in Figs. 7 or 8 of the present invention.

The features of claim 3 of the present invention is:

(A) In claim 3, "the driving portion being an open ended screwing driver;"

The citations USP6,363,798 and citation 6,070,506 do not disclose any open ended screwing driver at one end of the handle.

In the Fig. 3 of citation '506, the driving portion 33 is a socket like structure (see element 32). It is not an open end screw driver.

(B) In claim 3, "the opening is extended through three sides of the opening ended screwing driver;"

From part (A) in this remark, since no open ended driving portion is found in the two citations, and thus it is impossible that the opening is extended through three sides of the open ended screw driver.

(C) In the claim 3, "another end of the handle portion having a screw driver with a round hole and teeth being formed on an inner periphery of the round hole;"

However in the two citations USP6,363,798 and citation 6,070,506, the above features can not be found.

(D) In the claim 3, "the opening is extended through the handle portion and is extended through three sides of the opening ended screwing driver;"

Referring to Fig. 3 of the citation '506, it can found a space portion within the wall 21. Maybe we can assume this space portion is the opening of the present invention, but the space portion in the citation '506 is not extended to the driving portion 33.

In the citation '798, it is clearly that the openings 26, 21 are not extended to any driving portions.

RESULT

Since in above discussion, it is apparent that no prior art has the features of the present invention, especially in new claim 3. Furthermore, as we know that no other prior art has features of the present invention. Thus, the present invention is novel and inventive.

If there is any error in the specification, or claims, applicant requests and authorizes Examiner to amend the claims, specification and drawings of the present invention so that they can match the requirement of U. S. Patent. Attentions of Examiner to this matter are greatly appreciated.

It is now believed that the subject Patent Application has been placed in condition for allowance, and such action is respectively requested.

Respectfully submitted.
